NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats, all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

## MAPPING INFORMATION:

Louis Mapping information for this clone was provided by Dr. John D. Merbherson. Department of Genetics, Mashington University, St. L MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc

## SOURCE INFORMATION:

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Gosegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catamese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at the Roswell Park Cancer Institute
(http://bacpac.med.buffalo.edu)

NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is RP11-1196K6; the clone sequenced to the right is RP11-95H14, 2000 bp overlap finished in RP11-563E16. Actual start of this clone is at base position 1 of RP11-563E16.

                                                                                                                                                                                                                                                                 NOTICE: This sequence may not be the entire insert of this clone. It may be shorter because we only sequence overlapping sections once, or longer because we provide a small overlap between neighboring submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (SP:SSD1_XEAST, P24276) and to E. coll VACB and Ribonuclease II genes; contains similarity to Pfam domain Ribonuclease II genes; contains similarity to Pfam domain Fbr00773 (RMB), Scoree680.8, E-value-2.2e-201, N=1; coded for by the following C. elegans cDNAs: yk14e11.3, Yk21908.3, yk219h5.5, yk22699.5, yk309h10.5, yk317f1.3, yk31465.5, yk2569.5, yk538h7.5, yk3395c2.5, yk34d2.5, B1175755, yk545b2.3, yk545b2.5"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Coding sequences below are predicted from computer analysis, using the program Genefinder(P. Green and L. Hillier, ms in preparation). Location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The clone sequenced to the left is T24G10, 1600 bp overlap; the clone sequenced to the right is R02F2, 200 bp overlap. Actual start of this clone is at base position 1597 of CELF48E8; actual end is at 3296 of CELR02F2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                complement(join(3404. .3599,3650. .3812,3863. .3996,

Protein coding regions (CDS) have been predicted with the help of computer analysis using the Genefinder program in PomBase (an ACEDB database) with additional predictions for the branch-acceptor sites supplied by the program Sp3splice. CAUTION: It is possible that for any individual CDS we may have underestimated or overestimated the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       linear PLN 17-JAN-2000

                                                                                                                                                    (complementary strand).

The more significant matches with motifs in the PROSITE database are also included but some of these may be fortuitous.

The length in codons is given for each CDS.

IMPORTANT: This sequence MAY NOT be the entire insert of the sequenced clone. It may be shorter because we only sequence overlapping sections once, or longer, because we arrange for a small overlap between neighbouring submissions.

Cosmid c264 overlapped at the 5' end by cosmid c21E11 and at the 3' end by cosmid c25G10.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     /db_xref="SWISS-PROT:009929"

This clone was sequenced as part of a high-throughput process to sequence clones from Drosophila Gene Collection 1 (Rubin et al., Science 2000). The sequence has been subjected to integrity checks for sequence accuracy, presence of a polyA tail and contiguity within 100 kb in the genome. Thus we believe the sequence to reflect accurately this particular cDNA clone. However, there are artifacts associated with the generation of cDNA clones that may have not been detected in our initial analyses such as internal priming, priming from contaminating genomic DNA, retained introns due to reverse transcription of unspliced precursor RNAs, and reverse transcriptase errors that result in single base changes. For further information about this sequence, including its location and relationship to other sequences, please visit our Web site (http://fruitfly.beak.edu.) or send email to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SKDLSANNAVI PLOPLMIWA BENPHPMOSOPSARSNSKOA I PYGYPVSTPANYAMOLP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  similarity to other proteins are named after the database hits. Genes without significant peptide similarity but with EST similarity are named as unknown proteins. Genes without protein or EST similarity, that are predicted by more than two gene prediction programs over most of their length are annotated as hypothetical proteins. Genes encoding tRNAs are predicted as hypothetical proteins. Genes encoding tRNAs are predicted as Simple repeats are identified by repeatmasker (Arian Smit, http://tp.genome.washington.edu/RNAspeatmasker (Arian Smit, Location/Quallifiers)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /translation-"MKSASSEQSVERIENGHKKKRNRPQKONRRSKQSSVPIEDAHVE

```
sequence clones from Drosophila Gene Collection I (Rubin et al., Science 2000). The sequence has been subjected to integrity checks for sequence accuracy, presence of a polyh tail and contiguity within 100 kb in the genome. Thus we believe the sequence to reflect accurately this particular colons clone. However, there are artifacts associated with the generation of cDNA clone. However, there are priming, priming from contaminating genomic DNA, retained introns due to reverse transcription of unspliced precursor RNAs, and reverse transcription of unspliced precursor RNAs, and reverse transcription of unspliced precursor RNAs, and and relationship to other sequences, please visit our Web site (http://fruitfly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partifly.partif

TITLE JOURNAL

COMMENT

CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.

ANNOTATION OF FEATURES: STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and

local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, upublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < le-34) to the BST and CDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

SEQUENCING READ COVERAGE: Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL: http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.

BCM-HGSC

Direct Submission Submitted (11-JAN-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 7730, USA On Jan 11, 2002 this sequence version replaced gi:15383769. INFORMATION: http://www.hgsc.bcm.tmc.edu/ or email gc-help@bcm.tmc.edu CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the

## ANNOTATION OF FEATURES:

STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and

                                                                                                                                                                                                                                                           SEQUENCING READ COVERAGE: Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.
                                                                                                                                                                                                                                                                                                                                                                                                                       QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL: http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html.
local mapping efforts.

Repeats are identified using RepeatWasker (A. Smit and P. Green, unpublished.) For Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           22035
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       21992 ATAATACTTTCGACTGATGATAATATCCTATAAAGCGGATGGTGAGGA. 21945

NOTE: This is a 'working draft' sequence. It currently consists of 61 contags. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contags are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                       Consensus quality: 123669 bases at least 040
Consensus quality: 129396 bases at least 030
Consensus quality: 135066 bases at least 020
Estimated insert size: 124661; sum-of-contigs estimation
Quality coverage: 0x in 020 bases; agarose-fp estimation
Quality coverage: 2.3x in 020 bases; sum-of-contigs estimation

                                          * NOTE: This record contains 81 individual
* sequencing reads that have not been assembled into
* contigs. Kuns of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Web site: http://www-seq.wi.mit.edu
